

**FACULTY OF ENGINEERING
DEPARTMENT OF CIVIL AND ENVIRONMENTAL ENGINEERING
First Semester 2019 /2020 Session**

Course Title: Civil Engineering Seminar Course Code: CVE 509 Units: 2

Instruction: Answer Questions 1 and any other three Time Allowed: 3 hours

Question 1 (40 marks)

Methodology and results (Table Q1) of a research study are as presented as follows

Carbon resin electrodes were developed from used dry cells. Discarded dry cells (size D R20 UM-1) were collected from different locations in Nigeria. The cells were sectioned; graphite (carbon) were removed from them and pulverised. Powdered graphite was sieved into different particle sizes. A known mass of the powdered graphite was mixed with an organic binder, mould into 2.5 cm diameter, 10-cm long electrode using locally-fabricated extruder and plunger and a compaction machine. Details and properties of the electrodes were presented in another paper (Oke *et al.*, 2007). An electrolysing equipment was developed from local materials (Oke and Ogedengbe, 2007). Synthetic (simulated) wastewaters were prepared using procedures and methods specified in Standard Methods for Water and Wastewater Examination (APHA, 1998). Analytical Sodium Chloride (24.6 grams) was dissolved in 1000ml of distilled water as a stock solution and working synthetic wastewaters were prepared from the stock. A standard 2^4 factorial matrix was developed and 2^4 factorial experiments were utilized at random to determine influence of selected factors (separation distance between the electrodes, volume of the wastewater used, applied current and contact surface area of the electrode used) and interactions on efficiency of electrochemical process. The choice of the parameters to be studied was done on the basis of the theoretical data about several factors that determine the efficiency of an electrochemical method and the scarce knowledge concerning carbon-resin / aluminium electrodes. An electrochemical treatment plant on a laboratory scale was setup. From the results of the factorial experiments, a mathematical model was developed using Yates' algorithms. The factors with significant effects (identified through the use of hypothesis tests) from the results of the factorial experiments were then optimised using steepest ascent method and analysed using least squares method; the optimised parameters were confirmed by further experimental studies. Efficiency of the process was based mainly on chloride removal (Y,%), which was computed using equation. The choice of chloride removal for efficiency determination was done on the basis of literature (Holderness and Lambert, 1978), which stated that removal of chloride ion from aqueous solution

electrochemically can be achieved by using carbon electrode as anode. Chloride determination in both raw and treated wastewaters was carried out using argenotometric method specified in APHA (1998).

- a. Prepare a typical abstract from the methodology and results. (15 marks)
- b. Perform analysis of variance on the result (Table Q1). (15 marks)
- c. Identify and write single, two and more than two authors from the methodology. (5 marks)
- d. Cite and list five references (one author, two authors, three authors, and four authors). Demonstrate your knowledge of literature citing and listing (5 marks)

Table Q1: Selected results of the factorial experiment

| Sample Description | Performance 1 | Performance 2 | Performance 3 | Performance 4 |
|--------------------|---------------|---------------|---------------|---------------|
| Experiment A | 18.9 | 18.5 | 14.0 | 14.6 |
| Experiment B | 11.6 | 12.0 | 14.8 | 17.2 |
| Experiment C | 18.0 | 12.5 | 12.5 | 12.0 |
| Experiment D | 12.1 | 18.5 | 14.4 | 14.1 |
| Experiment E | 12.7 | 19.0 | 15.0 | 14.0 |

Question 2 (10 marks)

- a. Write a short note on engineering seminars and presentations (5 marks)
- b. Prepare a typical letter of transmittal of an engineering report. (5 marks)

Question 3 (10 marks)

- (a) Enumerate the outline of a typical engineering report. (5 marks)
- (b) Compute the standard deviation of these parameters. (5 marks)

Question 4 (10 marks)

Table Q1 presents a typical result of experiments conducted.

- a) Present statistical summary (mean, standard deviation and coefficient of variation) of the performance. (5 marks)
- b) Provide result section of abstract in line with 4 (a). (5 marks)

Question 5 (10 marks)

Evaluate effect of experiments on the Table Q1 at 95 % confidence level

Question 6 (10 marks)

Establish if there is a significant difference between the performance of the experiments (Table Q1) at 99 % confidence level.

ELIZADE UNIVERSITY, ILARA-MOKIN,
ONDO STATE, NIGERIA

DEPARTMENT OF MECHANICAL ENGINEERING
FIRST SEMESTER EXAMINATIONS

2019/2020 ACADEMIC SESSION

COURSE: MEE 517 – Characteristics of Refrigerants (3 Units)

CLASS: 500 Level Mechanical Engineering

TIME ALLOWED: 2 Hours: 30 Min

INSTRUCTIONS: Answer Questions 1 & 2, and any other three questions.

Date: February, 2020

Question 1

- a) List five (5) types of Refrigeration cycles, and briefly discuss any two (2). [4 $\frac{1}{2}$ Marks]
- b) Define the following:
 - i. Ton of Refrigeration
 - ii. Carnot Heat Pump[2 Marks]
- c) With the aid of schematic and temperature-entropy diagrams, describe the ideal vapour compression refrigeration cycle. [4 Marks]
- d) A refrigerator uses refrigerant-134a as the working fluid and operates on an ideal vapour compression refrigeration cycle between 0.16 and 0.7 MPa. If the mass flow rate of the refrigerant is 0.02 kg/s, determine:
 - i. Rate of heat removal from the refrigerated space and the power input into the compressor.
 - ii. Rate of heat rejection to the environment, and
 - iii. COP of the refrigerator.[4 $\frac{1}{2}$ Marks]

Question 2

- a) With the aid of well labelled diagram, explain absorption refrigeration cycle. [4 Marks]
- b) List three (3) energy sources used in absorption refrigeration system. [3 Marks]
- c) How does absorption refrigeration system differ from a vapour compression refrigeration system? [4 Marks]
- d) An absorption refrigeration system that receives heat from a source at 130 °C and maintains the refrigerated space at -5 °C is claimed to have a COP of 2. If

the environment temperature is 27 °C, can this claim be valid? Justify your answer. [4 Marks]

Question 3

- a) With the aid of a well labelled diagram, state the similarity and difference between a refrigerator and a heat pump. [3 Marks]
- b) List and explain briefly ten (10) properties of an ideal refrigerant. [5 Marks]
- c) What are the functions of the rectifier and the generator in an absorption refrigeration system? [2 Marks]

Question 4

- a) When selecting a refrigerant for a certain application, state six (6) qualities you would look for in the refrigerant. [3 Marks]
- b) Differentiate between the three (3) types of leak detection method in refrigeration system. [4 $\frac{1}{2}$ Marks]
- c) A refrigerant-134a refrigerator is to maintain the refrigerated space at -10 °C. Would you recommend an evaporator pressure of 0.12 or 0.14 MPa for this system? Why? [2 $\frac{1}{2}$ Marks]

Question 5

- a) List four (4) phase-out refrigerants, application and alternative. [4 Marks]
- b) Refrigerants are majorly classified into two (2). Discuss the two classifications with examples. [2 Marks]
- c) List and discuss briefly any four (4) factors to consider when designing a sustainable refrigeration system. [4 Marks]

Question 6

- a) According to American Society of Heating, Refrigerating and Air-conditioning Engineer (ASHRAE), write the chemical name and formula for the following refrigerants:
 - i. R-11
 - ii. R-113
 - iii. R-22
 - iv. R-744
 - v. R-134a[5 Marks]
- b) What is the function of a throttling device? [2 $\frac{1}{2}$ Marks]
- c) List four (4) types of throttling device used in refrigeration system. [2 $\frac{1}{2}$ Marks]

Question 7

- a) What is the function of a compressor in refrigeration system? List six (6) types of compressor. [4 Marks]
- b) Differentiate between ideal and actual vapour compression refrigeration cycles. [3 Marks]
- c) How does the COP of a cascade refrigeration system compare to the COP of a simple vapour-compression cycle operating between the same pressure limits? [3 Marks]
